## Web & Script Project Part 1

Our Project idea is a website of a restaurant that allows people to order food. It is an Italian restaurant that specializes in pasta but it is not limited to other Italian dishes. The website will allow customers to browse the wide range of menu options and search for their favorite foods. They can also place online orders and enter their address to see the estimated wait time for delivery.

Our Website name will be Casa Di Pasta. And our slogan will be Everything Fresh, Truly Italian. It will have four main pages. A Home page, Order Page, About us page and a Contact me Page. The Home page will provide the link to the address of the website through Google Maps and some pictures of our best selling dishes. The Order page will have an interactive menu where users can browse the menu and place their order. The About us Page will have our mission statement and the history of the company and how our team came together. The Contact Page will include a form for inquiries or feedback, along with location, hours, social media links and more information to get in contact with our team.

## Member Roles – Project Part 1

Name	GitHub Username	Responsibilities
Hermela	@hermelafassil-lgtm	<b>Home Page:</b> Layout and content, Welcome message & Best selling dishes.
Kanth	@jeffe32	<b>Order Page:</b> Menu browsing items, place order
Hermela	@hermelafassil-lgtm	<b>About Us Page:</b> Includes team bios, restaurant story
Hiro	@yungmoneyh	<b>Contact Page:</b> Feedback form, location, Operating hours & Social media links

# Casa Di Pasta

EVERYTHING FRESH. TRULY ITALIAN
